---

The usage of photonic crystals (PCs) as an anti-reflection coating (ARC) and back reflector to the amorphous silicon solar cell has been extensively explored in research.

Several factors contribute to the efficiency of monocrystalline solar panels. The primary factor is their single-crystal silicon structure. This structure allows electrons to move ...

The single layer ARC was found to have better antireflective properties at single wavelength only, typically around the middle of visible spectrum. The multiple layer ARC"s ...

From the surface of cover glass and solar cell, sunlight rays get reflected toward environment and thereby minimizing the output energy production. By coating the cover glass ...

After efficient solar cell modeling, optimum efficiency of 20.67% is being achieved by using SiO<sub>2</sub> surface passivation and Si<sub>3</sub>N<sub>4</sub> ARC layer. The effects on voltage, current, ...

This review looks at the field of anti-reflection coatings for solar modules, from single layers to multilayer structures, and alternatives ...

The discrepancy between power available and arc PV practically generated is directly attributed to the voltage of the arc, which is itself determined by arc resistance and arc distance, both of ...

In this study, the simulation was conducted on single, double and triple layers anti-reflective coatings (ARC) made up from different materials are applied on n-ZnO/p-Si solar cell ...

This review looks at the field of anti-reflection coatings for solar modules, from single layers to multilayer structures, and alternatives such as glass texturing.

The usage of photonic crystals (PCs) as an anti-reflection coating (ARC) and back reflector to the amorphous silicon solar cell has ...

In the first part, some widely used ARC materials and the applications of the corresponding materials on the surface of crystalline silicon solar cells are introduced. The ...

The antireflection coating (ARC) suppresses surface light loss and thus improves the power conversion efficiency (PCE) of solar cells, which is its essential function.
