Although the crystalline silicon cells are inherently opaque, transparency is managed by spacing the solar cells apart to varying degrees. This allows for an adjustable light transmittance (VLT) ...

The team's design features an all-back-contact (ABC) configuration, which places all electrical contacts on the rear side, ...

In this study, we explored a custom-designed, all-back-contact (ABC) configuration, which situates all electrical contacts on the rear side, to create glass-like transparent crystalline silicon (c-Si) ...

This study demonstrates the development of transparent crystalline silicon (c-Si) solar cells that exhibit vivid colors, enhanced PCE, and long-term stability.

A research team affiliated with UNIST has unveiled a method of supplying energy directly from glass of buildings, cars, and mobile devices through transparent solar cells.

Here, we present a novel approach to develop neutral-colored transparent c-Si solar cells that exhibit the highest efficiency among neutral-colored transparent solar cells ...

Although the crystalline silicon cells are inherently opaque, transparency is managed by spacing the solar cells apart to ...

The team's design features an all-back-contact (ABC) configuration, which places all electrical contacts on the rear side, creating a glass-like transparent crystalline silicon (c-Si) ...

25-cm² glass-like transparent crystalline silicon solar cells with an efficiency of 14.5%

In this study, we explored a custom- designed, all- back- contact (ABC) configuration, which situates all electrical contacts on the rear side, to create glass- like transparent crystalline ...

We expect that the development of transparent c-Si solar cells with an efficiency of $>18\%$ (transmittance = 20%) will be possible. To sum up, we successfully demonstrated high ...

Here, we present a novel approach to develop neutral-colored transparent c -Si solar cells that exhibit the highest efficiency among ...

In this study, we explored a custom-designed, all-back-contact (ABC) configuration, which situates all electrical contacts on the rear side, to create glass-like ...
